

Programming - Part I

Ricard Solé Casas

June 14, 2017

Foreword

The source code for this report and app can be found on Github¹. The live version of the app itself is online at <http://quiz.rsole.me>.

Some of the decisions taken in building this app do not follow the original suggested guidelines. The UI is a web frontend, but all the business logic is handled by the server-side via Java.

Declaration

I confirm that the submitted coursework is my own work and that all material attributed to others (whether published or unpublished) has been clearly identified and fully acknowledged and referred to original sources. I agree that the College has the right to submit my work to the plagiarism detection service. TurnitinUK for originality checks.

Acknowledgements

I'd like to thank my partner Shannon for her continued support and challenges that help me grow, both professionally and personally. I would also like to thank all of you who also helped me get here.

Chapter 1

Overview

Project is setup using the Java Play¹ framework to aid with following the MVC² pattern.

1.1 Models

From Wikipedia:

The model is the central component of the pattern. It expresses the application's behavior in terms of the problem domain, independent of the user interface. It directly manages the data, logic and rules of the application.

All the models used by this application are stored in PostgreSQL³. The bindings are done through PlayEbean⁴.

1.1.1 Option

`Option` is the smallest model. It has a one-to-many⁵ relationship to `Question`, where one `Question` can have `n` `Options`, and each `Option` belongs to 1 `Question`.

In essence it's an alias to a `String` type, the only difference is that `Option` has a `Long id` and a `Question question`.

See `models/Option.java`⁶ for implementation.

1.1.2 Question

`Question` is, arguably, the meat of the application. It holds *many* `Options` as a `List<Option>`, along with other parameters like difficulty, type, and category or the `Quiz` it belongs to. Like `Option`, `Question` holds a one-to-many⁷ relationship to `Quiz`. Except in this case `n` `Questions` belong to 1 `Quiz`.

See `models/Question.java`⁸ for implementation.

⁸<https://git.io/vHde6>

1.1.3 Quiz

This is the model that is actually used by other parts of the application. The rest are intermediary models to store data in a way that makes it easier to manipulate. `Quiz` owns two different models, `QuizResult` and `Question`. Any `Quiz` may have any number of `QuizResults` and `Questions`.

It also has a `String difficulty` value which ranges from *easy* to *hard*, or *mixed*. Also provides a method `int computeScore(DynamicForm answers)` to compute the score from a form submission.

See `models/Quiz.java`⁹ for implementation.

1.1.4 QuizResult

`QuizResult` is how the application stores the return value of `int computeScore(DynamicForm answers)` in `Quiz`. This is to allow sharing and retaking the `Quiz`, hence the belonging relationship.

See `models/QuizResult.java`¹⁰ for implementation.

1.2 Services

1.2.1 QuizService

1.3 Controllers

1.3.1 QuizResultsController

1.3.2 QuizzesController

Chapter 2

Test plan

<i>Test</i>	<i>Method</i>	<i>Expected</i>	<i>Actual</i>	<i>Evidence</i>
Selecting 10 creates a quiz with 10 questions	Click 10	There will be 10 questions	As expected	See figure 2.1
Selecting 20 creates a quiz with 20 questions	Click 20	There will be 20 questions	As expected	See figure 2.2
Selecting 30 creates a quiz with 30 questions	Click 30	There will be 30 questions	As expected	See figure 2.3
Cross on top left takes user back to quiz creation	Click x	Quiz will go back to form	As expected	See gif ¹
Selecting an option brings the next question up	Select an option	Next question will come up	As expected	See gif ²
Skipping will send the question to the end	Skip a question	The question will be skipped and asked again at the end of the quiz	As expected	See gif ³
When the timer runs out the quiz gets submitted	Wait for timer to run out	The quiz gets submitted	As expected	See gif ⁴
Score is displayed as a percentage	Finish the quiz	The score is displayed upon finishing the quiz	As expected	See figure 2.4
